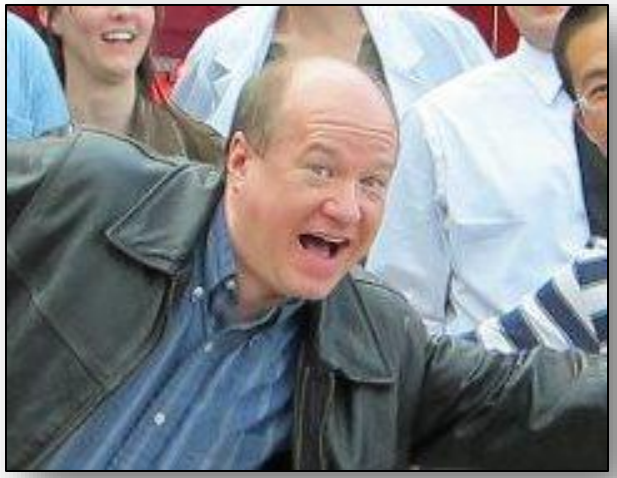
605.486 – Android Development

Module 0
Course Logistics

Contact Info

- Scott Stanchfield
- scott@javadude.com
- 301-609-0545 (9a-9p only, please)

About Me



- Developer since 1989
- Java Instructor - 4 years
- Montgomery College for 2 years
- Teaching at JHU - 11 years so far…

About Me

- Worked for some famous people
  - Tom McCabe (Cyclomatic Complexity)
  - Frank DeRemer & Tom Penello (LALR parsing)
  - Terence Parr (PCCTS/ANTLR)
  - (They're just people…
    But I like to name drop…)

Your Contact Info

- CHECK ISIS!!!
  - Be sure your email and phone number are correct!
  - I use this contact info for all communication

Grading

- 6 Programming Assignments
  - A, B, C, F, with possible+/-
    - Comments, but no specific point deductions
    - Points on Blackboard
      - 10=A+, 9=A, 8=A-, 7=B+, 6=B, 5=B- …
      - Just for storage of letters
        - "6" means "B", ***not*** that you lost 40%
  - Each day late = 1 full letter deduction
- Final grade: A, B, C, F, I
  - *without* +/-
  - No curve

Do not expect an "A" if you start your assignments a few nights before they are due…

General Grade Guidelines

A	On time, working, and good design
B	Not quite working, or Bad design/bad style, or One day late (but would have otherwise been an "A")
C	Little apparent effort, or Will not compile, or Will not execute properly, or Very bad design, or One day late (but would have been an "B"), or Two days late (but would have been an "A")
F	Plagiarism Three or more days late No apparent effort Not turned in

Programming Assignments

- All work must be your own
  - You can discuss assignment concepts
  - You *cannot* discuss implementations
- Must follow coding conventions

Assignment Grade Guidelines

Design	Design uses patterns discussed in class properly Design is abstracted effectively Design fits the problem Designed with maintenance programmer in mind
Function	Does it work properly? Is all required function present?
Style and Coding Conventions	Is the code readable? Can we figure out what it's doing just by reading the code? Does the code follow the required coding conventions?
Timeliness	Was the assignment submitted on time? one day late = one letter grade deduction two days late = two letter grade deduction ...

Coding Conventions

- Why? We read at your code

- Sometimes your code doesn't work correctly
  - Before or after submission
  - We carefully read the code to figure out why
  - We may give partial/more credit
  - We often have to do this for several assignments

Coding Conventions

- Consistent Indentation: spaces *or* tabs, ***not*** both!

- Type names: Upper-Camel Case
  - ShoppingCart
  - ObjectDrawingApplet

- Variable/method names: Lower-Camel Case
  - drawObject()
  - numberOfObjectsOnScreen

Coding Conventions

- Names use *full words*, not abbreviations or single letters.
- *Very* standard acronyms such as url are ok
- Names like "c" are generally not acceptable
- Exceptions (based on common, understood usage):
  - integer counters: i, j, k
  - "current number": n
  - catch(Exception e)

Coding Conventions

- All types ***must*** be contained in a Java package
- Project/Java package/Android package start with *lastname.firstname.hw#*
- Example:
  - Project
    - stanchfield.scott.hw4
  - Package
    - stanchfield.scott.hw4
    - stanchfield.scott.hw4.model
    - stanchfield.scott.hw4.database

Coding Conventions

- ***All*** user-facing string literals must be externalized into the strings.xml file.

- *This means **all**. Any string the user might see must be externalized.*

Discussion Participation

- Discussion Questions in some modules
- Can ask any questions at any time
  - Please do so using discussion forums as much as possible
- Make comments
- Suggest Alternatives

Office Hours

- Answer survey this week
  - Preferred day of week
- Will hold one 1-2 hour session using Adobe Connect
  - Start with one hour – will extend if needed
