605.486 – Android Development

Module 27
Publishing Apps

Google Play Store

- $25 lifetime fee for Play Store (requires Google Wallet)
- Create account
  - http://developer.android.com/distribute/google play/publish/register.html

Package Name, Signature, Version

- Once you publish
  - The application/signature pair is set in stone!
  - No one can publish with that package name without your key
- There are two version numbers in manifest
  - versionCode – actual version for store
    - 1, 2, 3, 4, 5, 6…
  - versionName – readable version
    - 1.0, 1.1, 2.0, 2.0.1, 2.1…

Keys

- DON’T LOSE YOUR KEYS!!!
- Easiest way to create – use the export wizard in eclipse
- Or use keytool

```
keytool -genkey -v -keystore scott.keystore
-alias scott -keyalg RSA -keysize 2048 -
validity 10000
```

Keys

- ONE MORE TIME…
- DON’T LOSE YOUR KEYS!!!

Example Exporting an App

- Using Eclipse
  - Simple Hello World app
  - Creating key and sign while exporting

- (to sign outside eclipse)

```
jarsigner -verbose -sigalg SHA1withRSA -
digestalg SHA1 -keystore <name>.keystore
<appname>.apk <alias>
```

Example: Publishing Apps

- Publish apps
  - https://play.google.com/apps/publish

Limiting Devices

- "BAD APP! It crashes on my device!"
- To limit which devices can see the app
  - http://developer.android.com/google/play/filters.html
- Most common
  - http://developer.android.com/guide/topics/manifest/uses-feature-element.html
