605.486 – Android Development

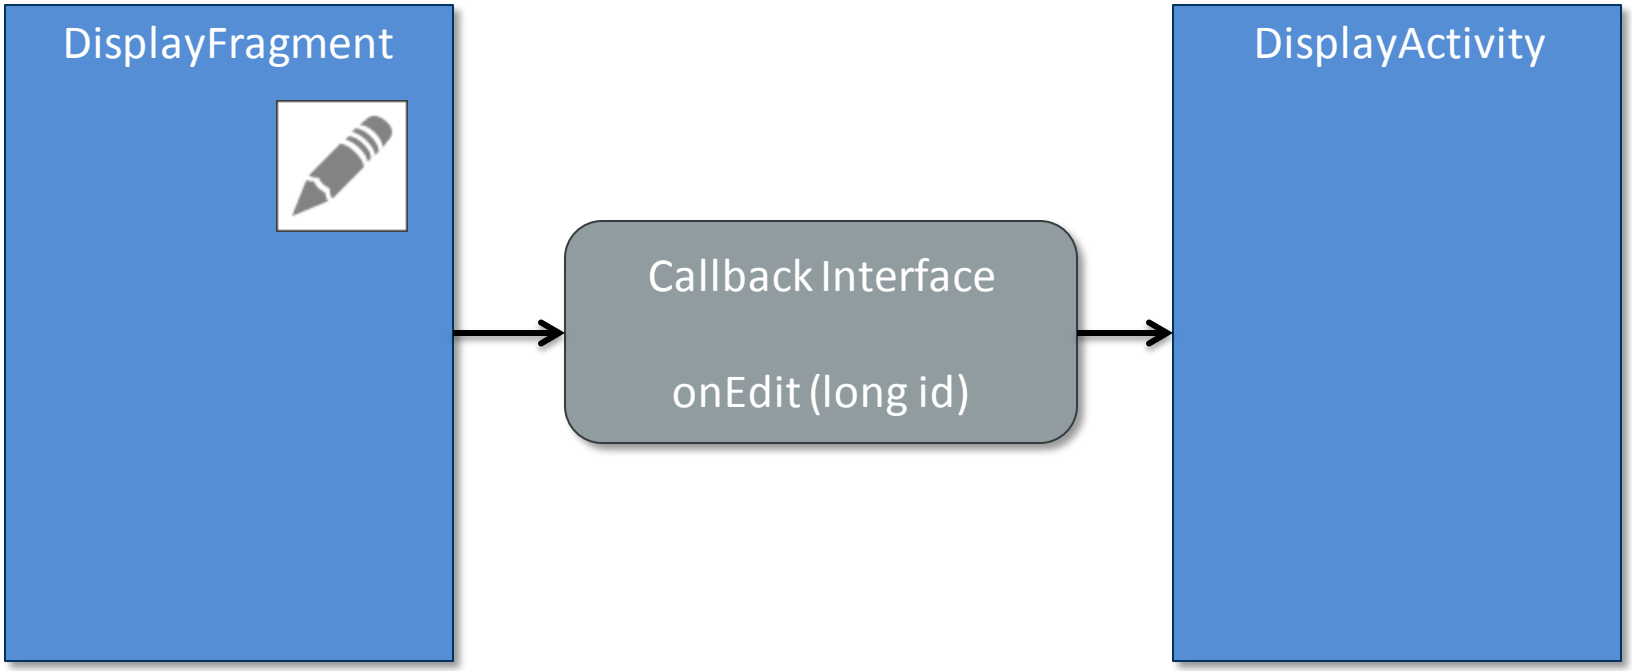
Module 8c

Fragment / Activity Interaction

Fragment/Activity Interaction

- Fragments should not care where they are included
  - This means they cannot assume navigation paths!
  - We need to separate user interaction in fragments from navigation in activities

Fragment/Activity Interaction



Add Fragment Listeners (1)

- Define listener interface in Fragment
- Add member variable and setter
- Replace explicit navigation with call to listener

Add Fragment Listeners (2)

- Setup listener in activity
  - Fragment f = getSupportFragmentManager()
    .findFragmentById(id);
  - f.setXXXListener(…)
    - Listener implementation should contain the navigation code

Add Fragment Listeners (3)

- Remove references to getIntent() in fragment – pass in data
- Move any onActivityResult() back to activity
  - Have it tell the fragment to do things via calls
- Ensure all navigation code is moved to activities!
